TOPICS OF IMPORTANCE TO PROGRESSIVE AGRICULTURISTS.

Valuable Facts About Potato Growth That Have Been Arrived at by the Latest Methods of Experimentation.

Of recent years the potato has been subjected to experimental culture in a manner never before attempted. The results of these experiments have been so convincing that they have led to a complete re-arrangement of the old theories of potato growth.

The best soil for the potato is a deep, rich, loamy soil, free from stones and other obstructions. It should be well drained, and the water should be kept off the surface.

The potato should be planted in rows, and the plants should be kept well weeded. The soil should be kept moist, and the plants should be watered if necessary.

The potato should be harvested when the leaves are yellow and the tubers are well developed. The tubers should be stored in a cool, dry place, and should be kept from freezing.

The potato is a very important crop, and it is well worth the trouble of growing it in the best possible manner.

For information call on Pierce & Son, Marion, Ky., or on J. H. Dyer & Son, Sturgis, Ky.

Sole Agents for Union, Western, and Eastern States.

On Monday the 10th day of November 1890, it being county court day, I will offer for sale at the court house door in Marion, Ky., a tract of land containing 360 acres, about 150 acres cleared and under fence, the remainder in timber, dwelling house, stables, orchard, etc. This farm is on Livingston creek, well watered, 2 miles from Dycusburg, Ky., and will make a good stock farm. Also at same time and place will sell a tract of land containing 300 acres on Clifty creek, about 35 acres cleared and under fence, dwellings houses, 2 barns, stables, etc., the remainder in timber. Any one wishing to buy these lands are requested to call on the undersigned at his farm in Caldwell county, Ky. Terms made known on day of sale.
